

ASSEMBLY INSTRUCTIONS

1. Carefully unpack the tree and pot from its protective packaging.
2. Place the pot in the desired location. If using outside, place in a covered and weather-safe area.
3. Insert the tree pole (at the base of the tree) into the secured pole stand located in the center of the pot.

4. Plug light strand into any standard outlet or UL approved extension cord.
5. Unwrap the branches and let them fall into place.

SHAPING YOUR TREE

1. Start from the bottom row of tree branches and randomly fan the bottom branches parallel to the floor. Separate the branch tips to form a V shape. Angle the tips slightly upward like they are reaching toward the sun.
2. Repeat the process for the remainder of the tree. Toward the top of the tree, start to shape the branch tips upward to give a more realistic look. By spacing the tips evenly, you are also dispersing the light evenly throughout the tree.
